
Mastering Productivity in Architecture

Learn how to use time tracking to become a true productivity expert in your architecture practice.

Introduction

As an architect making a living through creativity, you have multiple clients to answer to at the same time. You have deadlines with financial consequences tied to them if you miss them.

The pressure put on your shoulders is no joke, and lately, it seems like the weight has been getting heavier. In fact, a recent survey revealed a startling finding: A whopping 96.9% of architecture teams reported experiencing burnout in one form or another.

Which goes to show you could probably do with some help to stay on top of it all. Enter time tracking software, a powerful tool that can help you stay on top of all your projects, keep up with your clients, and more — without losing your sanity.

In this e-book you'll learn:

- Why architecture firms should track time
- 10 benefits of time tracking for architects
- Key time tracking features to look for in a time tracking app
- Additional tips for boosting architectural productivity with time tracking

Why should architects track time?

Time management is an absolute game-changer when it comes to running a successful and efficient architecture firm. Think of it like having a superpower, giving you the ability to understand exactly how your team is spending their precious hours, where resources are being utilized, and how projects are progressing.

Tracking time can also help you identify bottlenecks and identify areas for improvement that require additional support or training. And let's not forget the magic word – efficiency. When you track time, you're essentially finding those hidden pockets of time that might have slipped through the cracks.

In a world where every minute counts, time tracking gives you the superpower to navigate through the challenges of architecture while keeping your team and projects on the path to success.

Let's dive deeper into the powers of time tracking with 10 ways you and your team can benefit from the practice.

10 benefits of time tracking for architects

01 Improved teamwork and collaboration

Time tracking solutions can be used to keep everyone involved with a project on the same page. This makes it easier to communicate timelines, expectations, and objectives between colleagues and clients.

02 Remote work flexibility

With time tracking solutions in place, architects have the flexibility to work remotely from anywhere in the world and still be able to accurately track their time. No matter where you are, you can check in with your team, set up meetings or review the progress of any project.

03 Better financial visibility

Time tracking gives architects an accurate view of how much time is being spent on each project and even lets you better measure profitability. This helps you make smarter decisions when budgeting for future projects.

04 Increased productivity

Time tracking tools allow you to be more productive and focus on getting more work done. They eliminate the need to manually enter data into spreadsheets, which saves considerable amounts of time that can be reinvested into completing assignments.

05 Improved customer service

With real-time insights into how much time is being spent on specific projects, you can better anticipate customer needs and provide more accurate quotes. Additionally, you can accurately track your progress on a given project to ensure that they are consistently meeting client expectations.

06 Enhanced workflow efficiency

You can set up automated alerts to ensure that certain tasks are completed on time, and keep tabs on the progress of your team without having to constantly check in with each member individually.

07 Improved project management

By utilizing time tracking solutions, you can track progress on ongoing jobs and forecast when certain tasks are likely to be completed. This helps you better plan resources and allocate personnel where they're needed most. It also makes it easier to identify bottlenecks and make adjustments.

08 Enhanced team morale

By providing employees with the ability to track their own productivity, time tracking helps them stay motivated and better understand how their work contributes to the success of the team, keeping team morale high.

09 Improved customer insights

You can get an accurate view of how your clients are using your services. With this data, you can gain a deeper understanding of your customer's needs and adjust your strategies accordingly. This helps to ensure that your services are tailored to meet the demands of your customers.

10 Increased accuracy

You'll be able to more accurately track and record the amount of time you spend on a certain project when you use time tracking software. This makes it easier to accurately bill clients and provide them with a transparent view of the cost associated with your services.

Key features to look for in a time tracking app

When it comes to time tracking for architecture firms, the options are endless, and it can be overwhelming. Let's unveil the top must-have features that architects should look at among the sea of choices.

Project management

Look for an app that offers robust project and task management capabilities. Whether you're handling multiple projects or intricate phases within a single endeavor, the ability to organize and categorize tasks ensures nothing falls through the cracks.

Mobile accessibility

On-site visits, client meetings, and site inspections are likely part of your routine. Make sure your chosen time tracker offers a mobile app so you can log hours and access project data from your phone or tablet.

User-friendly interface

Look for a tool with an intuitive and user-friendly interface that minimizes the learning curve. The last thing you want is to waste time figuring out how to log hours when you could be making progress on your projects.

Integration with existing tools

Your time tracker should play well with others. Seek out a solution that integrates seamlessly with your existing software ecosystem, ensuring a smooth flow of data between applications.

Reporting and analytics

Numbers don't lie, and that's why reporting and analytics are vital features. A great time tracker should offer detailed reports and visualizations that provide insights into billable hours, resource utilization, and project profitability.

Flexibility in time entry

Architecture projects can be unique and diverse, and your time tracker should be flexible enough to adapt. Whether you need to track hours in intervals, enter time as decimals, or accommodate multiple currencies, ensure that the tool accommodates your specific needs.

Invoice generation

Time tracking is not just about internal management; it also impacts your client interactions. An ideal time tracker should seamlessly generate invoices based on tracked hourly rates so you can ensure accurate billing and maintain healthy client relationships.

Collaboration and permissions

In a team-based environment, collaboration is key. Look for a time tracker that allows multiple users with different permission levels to ensure that each team member has access to relevant data while maintaining data security and privacy.

7 tips for boosting architectural productivity

Boosting productivity is the secret sauce that transforms architecture firms from good to extraordinary. While a productivity tracker plays a significant role in this endeavor, there are several additional tips that can supercharge your team's efficiency and creativity.

Prioritize communication

Foster a culture of open communication and collaboration within your team. Encourage architects, designers, and project managers to exchange ideas freely and provide constructive feedback.

Clearly define goals

Set clear objectives for each project and organize them into manageable steps. Prioritize these tasks based on deadlines, complexity, and client needs.

Encourage continuous learning

The architecture industry is constantly evolving, and staying updated with the latest trends, materials, and technologies is crucial. Encourage your team to attend workshops, conferences, and training sessions to nurture their skills and stay ahead in the game.

Celebrate achievements

Acknowledge and celebrate your team's achievements, both big and small. Recognize hard work, dedication, and innovative thinking. Celebrations not only boost team morale but also motivate everyone to aim higher.

Promote work-life balance

Encourage a healthy work-life balance among your team members. Overworked and stressed architects are less likely to produce their best work. Implement policies that promote wellness and offer flexible working hours when feasible.

Automate mundane tasks

Identify repetitive tasks that consume time and automate them whenever possible. Alongside using a time tracker, this could include automated reporting, invoicing, or notifications to streamline administrative processes.

Create an inspiring workspace

A well-designed and inspiring workspace can have a profound impact on creativity and productivity. Ensure your office is well-lit, organized, and equipped with ergonomic furniture. Consider adding creative spaces where architects can brainstorm and find inspiration.

Master productivity as an architect with Harvest

As an architect, time tracking is an essential part of your success. As the industry evolves, you're able to achieve unprecedented levels of efficiency — all you have to do is choose the one that suits your needs the best. Amidst the multitude of options, Harvest stands tall as the ultimate time tracker, offering a powerful online timesheet software that architects can rely on.

Keep accurate timesheets and stay on top of your workload — no matter where you are

Understand where your team's time is spent and better allocate resources

Get an accurate view of how your clients are using your services to gain a deeper understanding of their needs

The screenshot displays the Harvest Timesheet interface. At the top, a navigation bar includes links for Time, Expenses, Projects, Team, Reports, Invoices, and Manage. Below this, a sub-navigation bar shows Timesheet, Pending approval, Unsubmitted, and Archive. The main section features a calendar view for 'Today: Thursday, 10 Mar'. A green plus icon in a square is labeled 'New entry'. To the right, a table shows time slots for Monday (7:45), Tuesday (8:00), Wednesday (7:41), and Thursday (5:08). Below the calendar, a list of time entries is shown, each with a project name and duration: 'New Company Website (Farringdon Inc) Meetings', 'Product Launch (Rotherhithe Design) Project Management', 'Mobile App (Spitalfields Communications) Design', 'Mobile App (Spitalfields Communications) Project Management', and 'Summer Marketing Campaign (Spitalfields Communications) Meetings'.
